

# Sophos iView

## An intelligent view of your network

Monitoring a distributed network across multiple locations can be a challenge. That's where Sophos iView can help. It provides you with an intelligent, uninterrupted view of your network from a single pane of glass. If you have multiple appliances, need detailed compliance reports, or require long-term log back up and management, Sophos iView is the ideal solution.

### Highlights

- ▶ Over 1000 built-in reports and views you can customize
- ▶ Consolidated reporting across multiple Sophos UTMs
- ▶ Compliance reporting for HIPAA, PCI DSS, GLBA and SOX
- ▶ At-a-glance identification of network activities and potential attacks
- ▶ Persistent long-term retention of all your reporting data
- ▶ Easy back-up of logs with quick retrieval for audit purposes
- ▶ Seamless integration with your existing network environment
- ▶ Out-of-the-box deployment without the need for technical expertise

### Added visibility

With over 1000 built-in reports and drill-down views, there's nothing you can't see or monitor on your network. We've made compliance reporting easy for HIPAA, PCI DSS, GLBA and SOX. You can even build your own custom reports and dashboards, focusing on problem areas or users on your network.

### Consolidated reporting

Sophos iView aggregates log and report data from all your Sophos UTMs into a consolidated view of all your network activity. Get a clear picture of what is happening on your network at any time from a single pane of glass.

### Security intelligence

A glance at the central iView dashboard lets you quickly identify potential network issues, such as suspect users or traffic anomalies, anywhere across your entire network. Spikes in ICMP traffic or unusual bandwidth consumption may indicate a possible attack.

### Log backup and management

Sophos iView provides essential persistent long-term backup of all your reporting and log data so if you need to upgrade or replace an appliance, your logs and reporting data is safe. Smart indexing and powerful search enables quick retrieval for audits or forensics.

Sophos iView provides an extensive set of reports that provide insight into your network traffic, web and mail usage, attacks and threats, compliance, and much more.

## Feature list and technical specifications

### Log reports

- ▶ Real-time log
- ▶ Archive log
- ▶ Audit log
- ▶ Archived log search
- ▶ Log storage (backup/ restore)
- ▶ Exportable format: MS Excel
- ▶ Compliance support

### Reports

- ▶ Over 1000 reports and views
- ▶ Historical reports
- ▶ Search reports
- ▶ Customized report views and dashboards
- ▶ Reports Include: Security, Spam, Virus, Traffic, Blocked Attempts, Blocked Web Attempts
- ▶ Compliance reports: HIPAA, PCI DSS, GLBA, SOX and FISMA
- ▶ Multi-format reports: tabular, graphical
- ▶ Exportable formats: PDF, Excel
- ▶ Email alerts/automated report scheduling
- ▶ Real-time reports

### Administration

- ▶ Web-based management console
- ▶ Role-based administration
- ▶ Multiple dashboards: report, resource and custom
- ▶ Automatic device detection
  - Device Grouping
  - Geographical location
  - Device type
  - Device models
  - Administrators
- ▶ Reports accessible from any location using a standard web browser

### Operating environment

- ▶ Integrated with Sophos UTM Hardened Linux OS
- ▶ Integrated install wizard
- ▶ Works out-of-the-box with Sophos UTM

### Virtual appliance specifications

- ▶ Sophos iView is available as a virtual appliance only.
- ▶ Sophos iView supports VMware, Hyper-V, Citrix, and KVM virtual environments
- ▶ The license you purchase should be matched to your environments activity and storage requirements

Sophos iView License	vSI-Light	vSI-1TB	vSI-8TB	vSI-Unlimited
Storage limit	100 GB	1 TB	8 TB	Unlimited (16 TB recommended)
Recommended CPU	Dual core	Dual core	Quad core	Quad core
Recommended memory	4 GB	4 GB	4 GB	8 GB
Approximate event capacity	Short-term evaluation only	Up to 300 events per second	Up to 600 events per second	Up to 2000 events per second

The screenshot shows a detailed view of 'Admin Events'. The table has columns: Date, Appliance, Event Type, Severity, Message, User Name, Source, and Status. It lists several events related to authentication and system updates, such as 'Authentication failed' and 'System update'.

Identify potential attacks before they become a problem by monitoring your network for spikes in ICMP traffic or other malicious behavior.

Take advantage of built-in compliance reports and forensic audit log capabilities to accelerate incident response.
